HARVONI is a prescription medicine used to treat adults and children 3 years of age and older with chronic (lasting a long time) hepatitis C genotype (GT) 1, 4, 5, or 6 infection with or without cirrhosis (compensated). In people with GT 1 infection and advanced cirrhosis (decompensated) or with GT 1 or 4 infection with or without cirrhosis (compensated) who have had a liver transplant, HARVONI is used with ribavirin.

ABOUT HARVONI

HARVONI can cause serious side effects, including:

Hepatitis B virus reactivation: Before starting treatment with HARVONI, your healthcare provider will do blood tests to check for hepatitis B infection. If you have ever had hepatitis B, the hepatitis B virus could become active again during or after treatment with HARVONI. This may cause serious liver problems, including liver failure and death. Your healthcare provider will monitor you if you are at risk for hepatitis B reactivation during and after you stop taking HARVONI.

POSSIBLE SIDE EFFECTS OF HARVONI

HARVONI can cause serious side effects, including:

- Those in the “Most Important Information about HARVONI” section.
- Slow heart rate (bradycardia): HARVONI, when taken with amiodarone (Cordarone®, Nexterone®, Pacerone®), a medicine used to treat certain heart problems, may cause slow heart rate, which in some cases has led to death or the need for a pacemaker. Get medical help right away if you take amiodarone with HARVONI and get any of the following symptoms:
  - fainting or near-fainting
  - dizziness or lightheadedness
  - not feeling well
  - weakness
- extreme tiredness
- shortness of breath
- chest pains
- confusion
- memory problems

The most common side effects of HARVONI include tiredness, headache, and weakness.

These are not all the possible side effects of HARVONI. For more information, ask your healthcare provider or pharmacist. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.
